AVRP Skyport Design for Hoover High Moves Forward for Construction Proposals

Historic Campus to Receive Needed Upgrades

AVRP Skyport announce that its design for two major buildings at Herbert Hoover High School, located at 4474 El Cajon Blvd., is moving forward to the next step in the development process. On Jan. 23, short-listed construction companies began the proposal process by touring the project site.

AVRP's design for Hoover High will feature a new performing arts theater and a new administration and classroom building. The project will pay homage to the original historical buildings from 1929 while including state-of-the-art facilities for present-day students. AVRPs design for a new theater will replace the existing undersized facility with a 24,500-square-foot new building consisting of a 500-seat auditorium, theater support space, and two drama classrooms adjacent to costume and scenery workshops which also serve as learning venues.

AVRP's design also includes a new 45,500-square-foot, three-story building which will consolidate administrative offices, counseling offices, and 20 new classrooms into one structure. Construction for the new facilities is estimated to cost \$37 million.

The nearly 90-year old Hoover High campus includes buildings dating back to the 1930s. The school provides education for more than 2,000 students every year.
